

## Medical Case Management

An illness or injury requires early medical intervention and proper co-ordinated care to succeed in returning the patient to optimum health. The need for a Medical Case Manager and the quality of their service therefore can be critical to the recovery of a patient.

### The Role of the Medical Case Manager

---

implement a valuable rehabilitation service for the sick or injured party, by liaising with General Practitioners, Consultants, Specialists, employers and other professionals associated with the case.

The Medical Case Manager is able to remove the barriers which often dislocate or delay the course of their recovery process, such as a lack of access to medical services or lack of availability of public services in the

### Chartis MR's Service

---

We only employ experienced qualified staff. All of our Medical Case Managers are fully registered medical practitioners.

Our timely intervention helps to prevent delays in their recovery process, thus helping to avoid an acute medical problem from becoming a chronic one, or a minor injury from becoming a major illness, or a major injury from developing into a permanent disability.

By steering an injured or ill party through their recovery, our Medical Case Managers focus their efforts on more than just functional capacity. First hand extensive experience is a fundamental requirement in managing recovery and this is where Chartis MR really excels. An appreciation of an individuals' personal circumstances, such as their employment outlook, is essential to implementing relevant rehabilitation programmes. The co-ordination, monitoring and evaluation of these programmes is central to this process, and key to a cost-effective and successful case conclusion.

Our Medical Case Managers work closely with our Vocational Case Managers, providing a holistic approach to recovery and returning individuals to optimum health and quality of life.
